

I recommend the new 60 meter band plan remain simple and straightforward. There should be minimal partitioning or special rules, and no mode exclusion. At a minimum, I would like to recommend a CW sub band as a way to keep the voice and non voice modes out of each others hair, just as its successfully done on most other bands.

Also to keep it simple, I would recommend the new band be open to all modes such as SSB, SSTV, CW, AM, digital, and not have any mode discrimination or special bandwidth rules. All groups (modes) should be allowed the same rights and opportunities on the new 60 meter band. I feel there is no reason to discriminate against any mode. Lets keep the 60 meter bandplan simple and straightforward. Thank you very much! Scott Freeberg WA9WFA
